PROFESSIONAL SUMMARY
AI/ML Software Engineer with 2.5 years of hands-on experience designing and deploying Machine Learning pipelines, FastAPI microservices, and SQL-backed data applications.

WORK EXPERIENCE
Machine Learning Engineer — TechVista AI Lab (2.5 years)
- Built and deployed production REST APIs using Python and FastAPI serving 50,000+ daily inference requests.
- Designed SQL (PostgreSQL) schemas and optimized complex analytical queries for model telemetry and feature stores.
- Implemented end-to-end NLP classification and Retrieval-Augmented Generation (RAG) workflows using PyTorch, LangChain, and Docker.

ROLE-RELATED PROJECTS
1. Intelligent Document Triage & RAG Pipeline: Built an automated PDF/DOCX extraction and semantic scoring service using Python, FastAPI, and vector embeddings, improving review speed by 65%.
2. Customer Churn Predictive API: Trained gradient-boosted and deep learning models with Scikit-Learn and deployed via Dockerized FastAPI containers.

EDUCATION & CERTIFICATIONS
B.S. in Computer Science — National University of Computer and Emerging Sciences (FAST-NUCES)
AWS Certified Machine Learning Specialty
